

My home WAYS TO SAVE ENERGY in the living room!

A great way to help kids, ages 3 and up, learn more about saving energy at home. After coloring the page, displaying the art on the refrigerator works as a great reminder for the whole family.

Set that thermostat

68 degrees when you're awake
5 to 10 degrees lower when asleep

Flip the switch

Don't forget to turn off the lights when no one is using them

Pull the shades

Window coverings help hold energy in and the cold out

Turn off the screens when no one's watching

TV's, game consoles, cable boxes and computers use a lot of energy

Unplug chargers

Device chargers use energy even when they're not charging anything
